Curing times with an LED light are 20 seconds for the dentin shade and 10 seconds for the universal shade. BEAUTIFIL-Bulk Flowable syringe was evaluated by 30 consultants in 608 uses. This flowable bulk-fill composite received an 88% clinical rating. - Due to self-leveling properties it optimally adapts to the cavity walls. - The new Assendo technology is responsible for lowering the translucency of the material from around 28% to approximately 10% during polymerization. Discoloured dentin can be effectively concealed, creating a more esthetic basis for the restoration compared with conventional flowable bulk-fill materials.	1 x 2.4gm	Shofu	Japan	Japan	4,990.0	2,495,000.0	2,079.2	2

31	Composite Posterior Restorative Posterior Composite Syringe, high compressive strength enhances longevity of a composite by withstanding mastication.	1 x 4gm	150	Syringe	M/s Fabnos Traders (Pvt) Ltd.	EPIC is a nano-hybrid composite resin ideal for direct and indirect esthetic restorations of anterior and posterior teeth. Its inorganic composition is equivalent to approximately 79% by mass and is formed by the mixture of micro and nano particles, with sizes ranging from 5 nm to 2 µm. This size distribution allows for more efficient load compaction, in which the smaller particles fill the spaces between the larger particles resulting in direct dental restorations of anterior and posterior teeth; Excellent optical characteristics; Easy polishing and high gloss Ideal viscosity; Excellent mechanical and physical properties; Better adaptation; Fluorescence similar to natural tooth; Flexural Resistance of approximately 103 Mpa and Compressive Resistance of 230 Mpa which allows it to be used in indirect restorations;	1x4gm	Biodinamica	EPIC	Brazil	4,495.0	674,250.0	1,123.8	2	Item Dropped

PULP FILL KIT endodontic cement - PULP FILL KIT is an endodontic cement, used as intra canal filling material. The liquid and the powder provide one viscous and consistent mixture, which is used as gutta-percha point. The setting of this cement is caused by the reaction between the Zinc Oxide and Eugenol, which in the presence of water produces the zinc eugenolate. The resin improves the characteristics of the mixture and delays the setting time. The radiopacity is optimized by the bismuth and barium salts. The formulation of PULP FILL KIT is similar to the one formulated by DENTON.
