CBL PATHOLOGY RENAL

By the end of the CBL the student should be able to:

- Differentiate between different types of renal cysts based on clinical and pathological criteria.
- Explain genetic, congenital, and acquired mechanisms leading to cyst formation, including polycystic kidney disease.
- Identify common signs, symptoms, and systemic complications of renal cystic diseases.
- Analyze imaging and laboratory findings to diagnose and assess renal cysts.
- Describe gross and microscopic characteristics of renal cysts and their clinical significance.
- Explain the differential diagnosis of different types of renal cysts.
