CBL PATHOLOGY RENAL

By the end of the CBL the student should be able to:

1. Differentiate between different types of renal cysts based on clinical and pathological criteria.
2. Explain genetic, congenital, and acquired mechanisms leading to cyst formation, including polycystic kidney disease.
3. Identify common signs, symptoms, and systemic complications of renal cystic diseases.
4. Analyze imaging and laboratory findings to diagnose and assess renal cysts.
5. Describe gross and microscopic characteristics of renal cysts and their clinical significance.
6. Explain the differential diagnosis of different types of renal cysts.
